

Red Sift Domain Protection introduces phishing and spoofing protection to Cisco customers. [Red Sift's OnDMARC](#) is a cloud-based DMARC (Domain-based Message Authentication, Reporting, and Conformance) email protection solution that simplifies the process of securing domains by configuring SPF, DKIM, and DMARC protocols.

Benefits:

- Accelerated path to full DMARC protection (average time of 4-8 weeks)
- Streamlined management of email authentication records with hosted Dynamic SPF/DKIM/DMARC/MTA-STX
- First LLM for a DMARC solution to make it easier for security teams to gather, analyze, and act on real-time cybersecurity insights
- Enhanced deliverability and brand trust with BIML logo placement in inboxes
- Prevention of spam that bypasses DMARC safeguards
- Compliance with industry requirements from Google, Yahoo, Microsoft
- Exclusive and Verified integration with Cisco XDR and Splunk for enhanced SOC security monitoring
- SolutionsPlus Product SKU: **DOMAINPROTECT-SUB** (includes 25 active domains with onboarding help and support).

Discovery Questions:

- Are you aware of any instances where your customers or partners have received emails claiming to be from you, but they weren't legitimate?
- Have you noticed an uptick in phishing/spoofing attempts on your domains?
- Are you aware that SPF, DKIM and DMARC authentication are now mandated for legitimate senders sending to Google, Yahoo and Microsoft?
- Have you had any feedback from clients or partners about emails not reaching their inbox, or important communications getting missed?
- How many active email-sending domains do you currently manage?
- How many third-party services or platforms are authorized to send emails on your behalf? Are you confident all of these sources are properly authorized?

Use Cases:

- Preventing domain spoofing to protect brand reputation.
- Improving email deliverability by ensuring legitimate emails are authenticated and comply with mailbox provider requirements.
- Gaining insights into who is sending email on behalf of the organization.
- Reducing the risk of phishing and impersonation attacks that target employees, partners, or customers.
- Meeting regulatory and compliance requirements in sectors with strict email security standards (e.g., finance, healthcare).
- Streamlining the management and authorization of third-party email senders.
