

SecureX is a cloud-native, built-in platform experience within Cisco's portfolio that connects to your infrastructure. It is integrated and open for simplicity, unified in one location for visibility, and maximizes operational efficiency to secure your network, endpoints, cloud, and applications.

Benefits:

- Accelerate time to detect and remediate threats with human error minimized.
- Share context with incidents by navigating displays with included browser ribbon.
- Alert notifications with high-fidelity cross-platform analytics.
- View ROI and operational metrics in prebuilt and customizable dashboards.
- Write apps and integrations with open APIs with the Developer program.
- Proactively hunt threats as well as manage vulnerabilities.
- Eliminate repetitive tasks and broaden scope of cloud orchestration, simplify business process and reduce human error.

Key Features:

Single Sign-on: Duo-protected multi-factor authentication allows you to access all your Cisco Secure products with one set of credentials, from any device, anywhere.

Dashboard: A fully configurable dashboard gives one view across your security infrastructure for unified visibility and aggregated, actionable intelligence across your security environment.

Integrations: Built-in integrations with Cisco Secure products and third-party solutions through built-in, pre-packaged, or custom integrations for a connected architecture and consistent experience.

Threat Response (SXTR): Aggregate cyber threat intelligence from Cisco Secure and third-party products into a single view. Detect, respond, and recover faster with superior insights and context.

Orchestration: Automate routine tasks using prebuilt workflows that align to common use cases. Or build your own workflows with low- to no-code canvas.

Device Insights: Get a comprehensive device inventory with the contextual awareness needed to identify gaps in coverage and simplify security investigation.

Ribbon: Use the dashboard ribbon for quick access to SecureX features such as:

Casebook: A built-in tool to assign a case a name, description, organize, and share sets of observables of interest primarily during an investigation and threat analysis.

Incidents: An XDR element where analysts can look at identified incidents from integrated tools, enrich the data and take action within a single platform.

Orbital:¹ Provide endpoint visibility in familiar SQL format, with intuitive graphical interface and pre-built queries for threat hunting and incident response.

FAQs:

Q: Is SecureX a SIEM?

A: No. SecureX is positioned to work with any SIEM and streamline events with just one connection across our entire portfolio.

Q: Is SecureX a SOAR?

A: No. It is much broader and more integrated than a SOAR and Cisco is open to working with stand-alone SOAR offerings.

Q: Which Cisco Secure products include access to SecureX?

A: Eventually, all. A license to any product [here](#) grants rights to use SecureX.

Q: What is SSE?

A: Security Services Exchange (SSE) is the cloud-hosted data and broker that facilitates communication between SecureX and on-premise devices.

Q: What is the browser plugin and how can I get it?

A: An applet that lives in your browser ([Chrome](#) & [Firefox](#)) and allows you to take all the tools in the Ribbon with you everywhere you go on the web.

Q: How do I access SecureX using CSA (Cisco Security Account) credentials?

A: Navigate directly to [SecureX](#) and choose 'Cisco Security' as the identity provider or choose [single sign-on](#).

Q: Can I use a third-party identity provider with SecureX Sign on?

A: More info about 3rd party IdP support is available [here](#).

Q: How can I set up Secure Endpoint in SecureX?

A: You may follow the in-product configuration steps [here](#).

Q: Will SecureX work with competitive third-party products?

A: Yes. Cisco is committed to a platform using open APIs to unify visibility, enable automation and strengthen security with competitive products.
